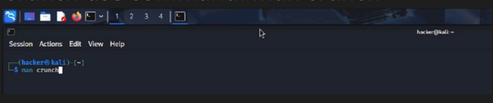
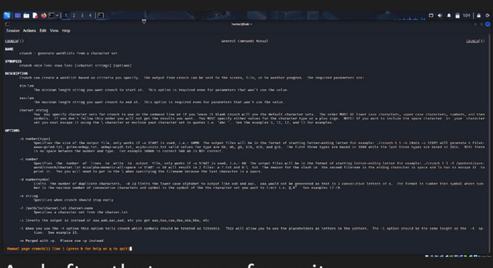
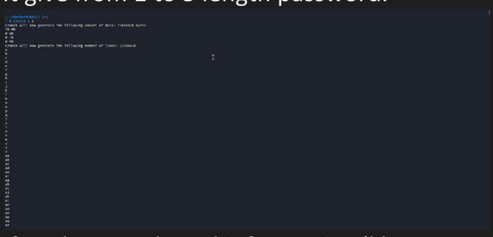
1. Crunch is a wordlist-generation tool in Kali Linux used to create custom password dictionaries based on patterns, length, and character sets.

2. For the detailed help guide about Crunch use command: man crunch



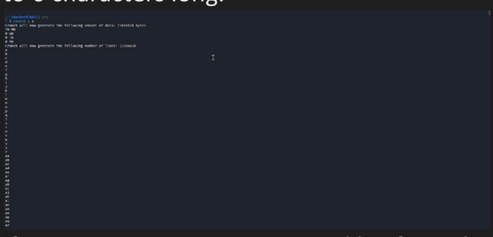


3. And after that press q for quit.
4. If we want to create a password without giving any variables by using command: crunch 1 5
5. It give from 1 to 5 length password.



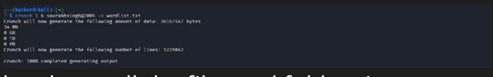
6. If we have gathered information (like names, date of birth, company, interests) of victim and use command:
crunch 1 6 saurabhsingh@2005

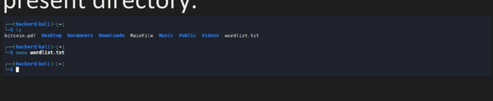
7. Crunch will take every character you provided and generate all combinations up to 6 characters long.



8. If we want to create a password list from the given information and want to create a file to store the password using command: crunch 16 saurabhsingh@2005 -o wordlist.txt

   1 6→ create all passwords from 1 to 6 characters.
   saurabhsingh@2005 → use these characters only.
   -o wordlist.txt → save the output to a file.





9. ls : shows all the files and folders in your present directory.
