PASSWARD ATTACK

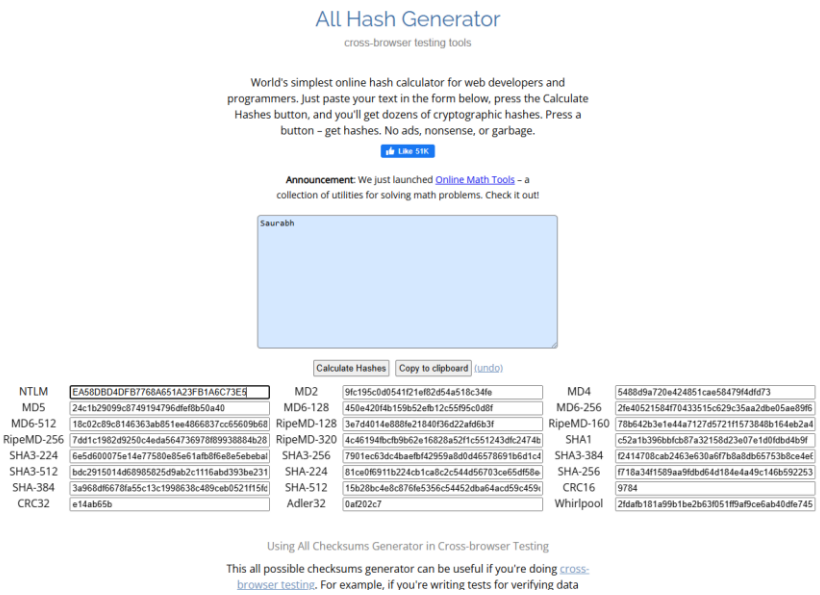
Monday, October 27, 2025
2:00 PM

NAME : SAURABH SINGH
BRANCH : CSAI – 4
ROLL NO. : 2401921520233
MAIL: saurabhqr@yahoo.com

Q1 . How to convert plane text to hash algorithem?

Steps:

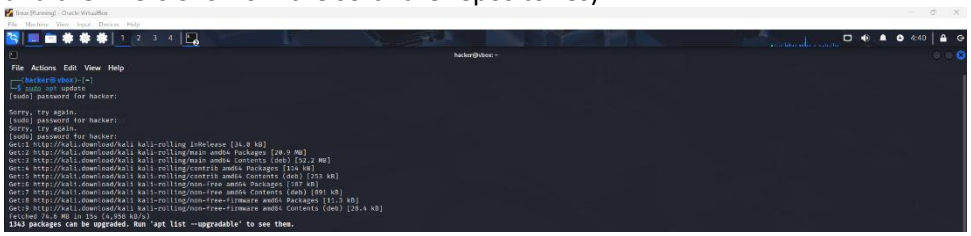
1. Open browser and search hash converter or go to link: https://www.browserling.com/tools/all-hashes
2. Write plane text in blue box.
3. Click on calculate hashes.
4. Copy the Hash Code.

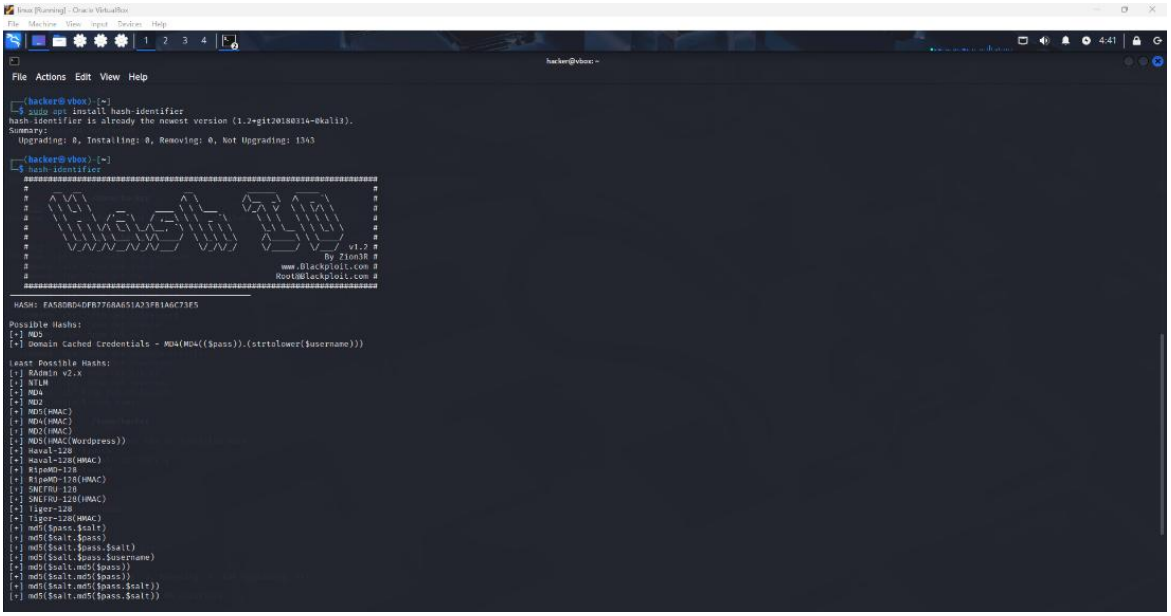


Q2. How to identify hash algorithem?

Steps:

1. Open terminal command in kali linux.
2. Write command : sudo apt update (sudo apt update updates the list of available packages and their versions from the software repositories)





3. Write command : sudo apt install hash-identifier .
   (It installs the utility from your distribution repository.)
4. And write command: hash-identifier (It starts an interactive prompt. You'll see the ASCII art banner and a prompt asking for a hash to analyze.)
5. Enter (paste) the hash you want to identify and press Enter.
6. Example hash : R4ABAD88A4E7E80A415A37F947A5F417F3
7. The tool compares the hash's length, character set (hex, base64, etc.), and other heuristics against known formats and prints likely matches (MD5, SHA variants, NTLM, MySQL, etc.).
