Villain (Backdoor attacks)

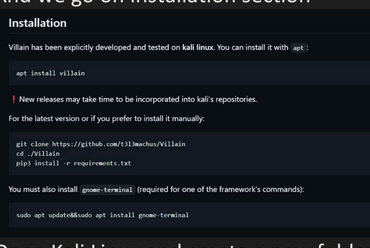
30 November 2025 23:27

Name	Saurabh Singh
Section	CSAI 4
Roll No	2401921520233

Villain is an open-source cybersecurity tool used in Red Teaming and post-exploitation research. Security professionals use it to understand how adversaries maintain backdoor access to compromised systems so that they can design better defenses.

1. Search on Google search engine:
   https://github.com/t3l3machus/Villain
   We land on GitHub repo page

   And we go on installation section



2. Open Kali Linux and create a new folder

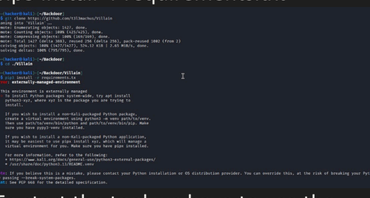
```
┌──(hacker㉿kali)-[~]
└─$ mkdir Backdoor

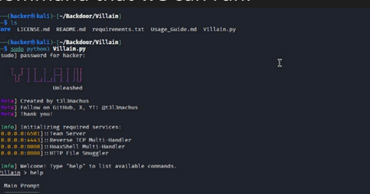
┌──(hacker㉿kali)-[~]
└─$ cd Backdoor
```

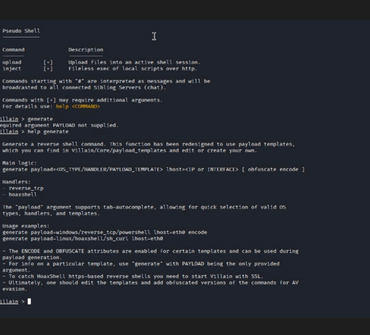
3. With the help of commands
   git clone
   https://github.com/t313machus/Villain

   cd ./Villain

   pip3 install -r requirements.txt



4. To start the tool we have to use the command: sudo python3 Villain.py




5. help command will help us to see the command that we can run.
