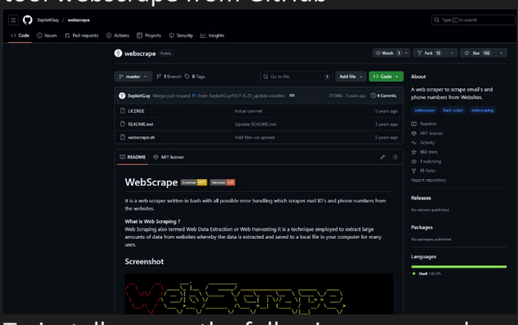
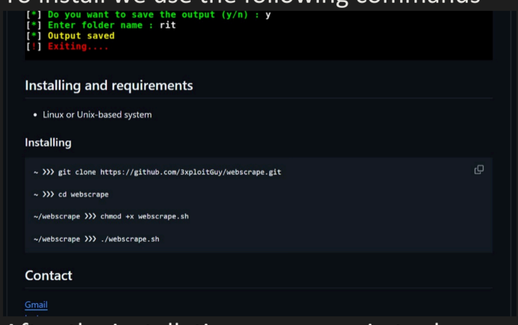
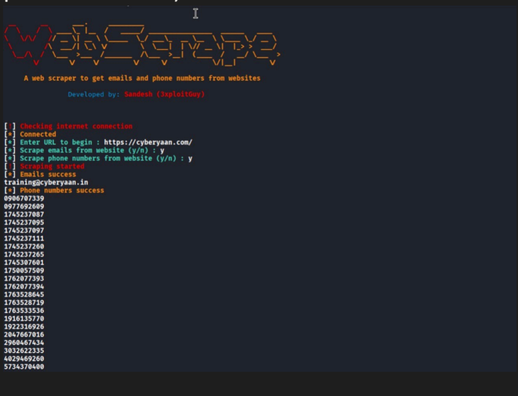
1. Web Scraping means collecting information automatically from websites using software, scripts, or tools.

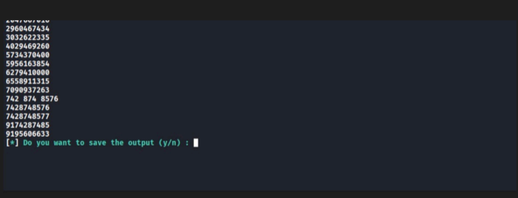
   It is like a computer visiting a website, reading the data, and saving it for you.
2. To download all the emails and phone number from the Website we can use the tool webscrape from GitHub



3. To install we use the following commands



4. After the installation we see main tool interface
5. Firstly it ask for the URL which is going to be target, eg: https://cyberyaan.com




6. Now we have to paste the URL in the tool and command : y (for scraping email and phone number).
