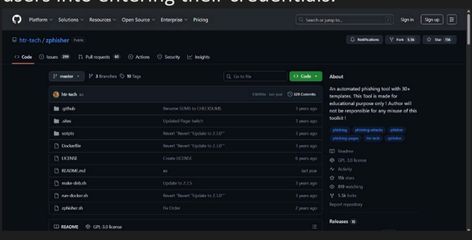
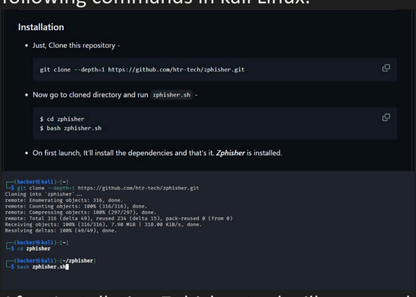
Section	CSAI 4
Roll No.	2401921520233

Zphisher is an automated phishing tool used to create fake login pages of popular websites to trick users into entering their credentials.

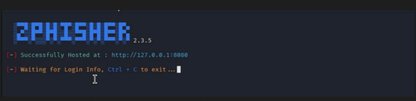


1. We can install the Zphisher by using following commands in kali Linux.

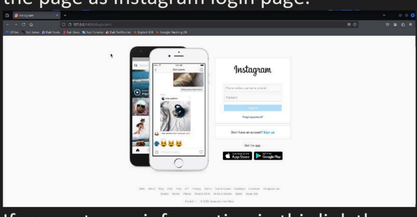


2. After Installation Zphisher tool will open and we are going to continue with Instagram.

3. It will make a similar link to the page of Instagram.



4. Open the link in search engine. We can see the page as Instagram login page.



5. If you put your information in this link then you will see all the information on your Kali Linux, e.g., Username and password.

9. You can gather the sensitive information of the victim using this tool.
